

Ascospores, 22, 23  
 Asparaginase, 96  
 ATP (adenosine triphosphate), 41, 53  
 ATP yield coefficient, 208  
 Attenuated form of a virus, 401  
*Autographa californica* nuclear polyhedrosis virus  
 (Ac NPV), 429  
 Autologous implantation, 466  
 Autotrophic metabolism, 150-52  
   photosynthesis, 151  
 Autotrophs, 49, 150  
 Auxin, 51, 409  
 Auxotrophic mutants, 222  
 Auxotrophic mutations, 241  
 Axial-flow hollow-fiber reactors, 399  
 Axial-flow hydrofoil agitators, 398

## B

B-1,4 glycosidic bond, 38  
 $\beta$ -amylase, 94  
 B-galactosidase, 120  
 Bacillus, 12  
 Back mutation, 247  
 Bacteria, characteristics of components of, 18  
 Bacterial displays, 235  
 Bacterial fermentation, and wall growth, 298  
 Bacteriochlorophyll, 17  
 Bacteriophages, 14, 53  
 Baculovirus, 236  
 Bakers' yeast production, 526-27  
 Balanced growth, 162-63, 175-76  
 Ball mills, 342  
 Basal level, 120  
 Basidia, 23  
 Basidiomycetes, 23  
 Batch and continuous reactor modifications, 248-61  
   chemostat with recycle, 248-50  
   fed-batch operation, 256-61  
   multistage chemostat systems, 250-56  
   perfusion systems, 261  
 Batch cultures, operability/reliability of, 247  
 Batch growth, 156-75  
   apparent growth yield, 165  
   cell concentration, quantifying, 156-60  
   cell mass concentration, determining, 158-60  
   cybernetic models, 189  
   death phase, 164-65  
   deceleration growth phase, 163  
   defined, 156

  environmental conditions and growth kinetics,  
     169-73  
   exponential growth phase, 162-63  
   filamentous organisms, growth models for, 183  
   growth patterns and kinetics in batch culture,  
     160-68  
   heat generation by microbial growth, 173-75  
   lag phase, 161-62  
   logarithmic growth phase, 162-63  
   logistic equations, 180-82  
   microbial growth inhibition, 178-79  
   phases of, 160-68  
   stationary phase, 163  
   transient behavior models, 183-89  
     chemically structured models, 184-89  
     models with time delays, 183-84  
 Batch kinetics, 65-66  
 Bidirectional synthesis of DNA, 108  
 Binary nomenclature, 12  
 Binding strength, 265  
 Biochemical engineering, 2  
 Bioenergetics, 134-36  
 Bioinformatics, 240  
 Biolistic process, 236, 241  
 Biological basics, 11-54  
   cell construction, 25-46  
     amino acids, 26-34  
     biopolymers, 25-26  
     carbohydrates, 34-38  
     cellular macromolecules, 26  
     DNA (deoxyribonucleic acid), 40, 43-46  
     fats, 39-40  
     lipids, 38-39  
     nucleic acids, 40-43  
     proteins, 26-34  
     RNA (ribonucleic acid), 40, 40-43, 46  
     steroids, 40  
   cell naming, 12-14  
     archaeobacteria, 13  
     binary nomenclature, 12  
     eubacteria, 13  
     eucaryotes, 13  
     genus, 12  
     nomenclature, 12  
     procaryotes, 13  
     species, 12  
     taxonomy, 12  
     viruses, 13
