

- Metabolic flux analysis, 455  
 Metabolic pathway control, 123-24  
 Metabolic pathways, 133-54
  - aerobic glucose metabolism, control sites in, 142-43
  - anaerobic metabolism, 148-50
  - animal cells, 387
  - autotrophic metabolism, 150-52
  - bioenergetics, 134-36
  - biosynthesis, 145-48
  - glucose metabolism, 137-41
  - hydrocarbons, metabolism of, 144-45
  - nitrogen fixation, 144
  - nitrogenous compounds, metabolism of, 143-44
  - respiration, 141-42
- Metabolic regulation, 105, 119-24
  - cells, 119-24
  - genetic-level control, 119-22
  - metabolic pathway control, 123-24
- Methanogens, 19, 51  
 Michaelis, L., 60-61  
 Michaelis-Menten constant, 62, 86  
 Michaelis-Menten kinetics, 60, 86, 96, 176
  - experimentally determining rate parameters for, 64-67
  - batch kinetics, 65-66
  - double-reciprocal plot (Lineweaver-Burk plot), 64
  - Eadie-Hofstee plot, 65
  - Hanes-Woolf plot, 65-66
  - interpretation of  $K_m$  and  $V_m$ , 65-66
- Microarrays, 237  
 Microbes, compared to plant cells in culture, 407-11  
 Microbial diversity, 11-12
  - aerobic organisms, 11-12
  - anaerobica organisms, 11-12
  - bacillus, 12
  - coccus, 12
  - extremophiles, 12
  - facultative organisms, 12, 53
  - mesophiles, 11
  - psychrophiles, 11
  - spirillum, 12
  - thermophiles, 11
- Microbial floc, 269  
 Microbial growth:
  - as autocatalytic reaction, 155-56
  - heat generation by, 173-75
  - specific growth rate, 155
  - stoichiometry of, 207
- Microbial growth inhibition, 178-80
  - product inhibition, 179
  - substrate inhibition, 178-79
  - by toxic compounds, 179-80
- Microbial product categories, 166-68
  - growth-associated products, 166
  - mixed-growth-associated products, 167-68
  - nongrowth-associated products, 166-67
- Microencapsulation, 80, 399-400  
 Microfiltration, 358-60  
 Micronutrients, 48, 50-51, 54  
 Microporous filters, 358  
 Microporous filtration (MF), 358-60  
 Microtubules, 22, 387  
 Microvilli, 385-86  
 Mitochondria, 20-21, 386  
 Mitosis phase, eucaryote cell division, 20  
 Mixed cultures, 475-511
  - biological oxygen demand (BOD), 489-90
  - biological waste treatment, 488-508
    - defined, 489
    - overview, 488-91
    - processes, 491-501
    - sludge, 491
    - waste-water carbon content, 489-90
  - chemical oxygen demand (COD), 489
  - dynamics of, 475
  - industrial utilization of, 487-88
    - example of, 488-508
  - major classes of interactions in, 476-79
    - amensalism, 476, 478-79
    - antagonism, 476
    - commensalism, 476, 478
    - competition, 477
    - crowding, 476
    - eccrinolysis, 476
    - feeding, 476
    - mutualism, 476-78
    - neutralism, 477
    - parasitism, 476, 479
    - predation, 479
    - proto-cooperation, 476-78
    - symbiosis, 476, 478
  - in nature, 485-87
  - simple models describing interactions, 479-85
    - total organic carbon (TOC), 489- Mixed-growth-associated microbial products, 167-68
- Mixed-liquor suspended solids (MLSS), 490
