

- Airlift loop reactor, 287, 291-92
 Algae, 19-25, 24
 Aliphatic hydrocarbons, metabolism of, 144-45
 Allosteric enzymes, 67
 Allostery binding, 67
 Amberlite, 80
 Amensalism, 476, 478-79
 Amine, 51
 Amino acids, 26-34, 28, 51
 biosynthesis of, 145-48
 chemical structure of, 29
 genetic code for, 104
 in serum-containing/serum-free media, 392-93
 Aminoacyl site, 115
 Aminoacyl-t-RNA synthetase, 115
 Amoeae, 24
 Amylases, 94, 97
 Amylopectin, 37-38
 Amylose, 37
 Anaerobic cells, 11-12, 53
 Anaerobic digestion, 499-501
 cell yields, 500
 digester design, 501
 methane formation, 500-501
 solubilization of insoluble organics, 499
 volatile acid formation, 500
 Anaerobic metabolism, 148-50
 Anaerobic organisms, 11-12
 Anaerobic processes, 515-24
 acetone-butanol production, 521-24
 ethanol production, 515-19
 lactic acid production, 519-21
 Anaerobic respiration, 148, 152
 Anchorage-dependent cells, 388
 Animal cells, 19-25
 anchorage-dependent cells, 388
 biochemistry of, 385-87
 cell division/movement, 387
 contact inhibition, 389
 continuous cell lines, 389
 cultivation methods, 387-96
 culture:
 bioreactor considerations for, 396-400
 classic method for, 397-98
 microcarrier culture methods, 398
 cytoskeleton, 387
 endoplasmic reticulum (ER), 386
 glyoxysomes, 386
 Golgi body, 386
 growth media, 390-94
 normal cell lines compared to, 389
 Anisotropic structure, 358
 Antagonism, 476
 Antibodies, 31
 Antigen, 31
 Antigen-antibody complex, 31
 Apoenzyme, 57
 Apoptosis, 399
 Apparent growth yield, 165
 Aqueous two-phase extraction, 348-49
 Archaeabacteria, 13, 17-19, 53
 metabolism, 19
 Arrhenius equation, 77-78
 CMRL 1066, 394
 Dulbecco's enriched (modified) Eagle's medium (DMEM), 394
 Eagle's minimal essential medium (MEM), 394
 394
 Ham's F12, 394
 RPMI 1640, 394
 serum, 391-94
 hybridoma cells, 390
 immortal cell lines, 389
 kinetics of growth of, 394
 lysosomes, 386
 metabolic pathways, 387
 microencapsulation, 399-400
 microvilli, 385-86
 mitochondria, 386
 mortal cell lines, 389
 nonanchorage-dependent cells, 388
 nuclear pores, 387
 nucleoli, 387
 nucleus, 387
 peroxisomes, 386
 primary culture, 387
 primary mammalian cells, 387-88
 products, 400-402
 categories of, 400
 enzymes, 401-2
 hormones, 401
 immunobiological regulators, 401
 insecticides, 402
 monoclonal antibodies (MAb's), 400-401
 virus vaccines, 401
 whole cells and tissue culture, 402
 secondary culture, 388-89
 structure of, 385-87
 surface of, 386
 transformed cell lines, 389
 normal cell lines compared to, 389
 Anisotropic structure, 358
 Antagonism, 476
 Antibodies, 31
 Antigen, 31
 Antigen-antibody complex, 31
 Apoenzyme, 57
 Apoptosis, 399
 Apparent growth yield, 165
 Aqueous two-phase extraction, 348-49
 Archaeabacteria, 13, 17-19, 53
 metabolism, 19
 Arrhenius equation, 77-78
